Computer Activities

Computer Activities Basics

TimeCamp is a time-tracking system with multiple features that allow you to monitor computer activity. It allows to view the names of visited websites and apps and how much time you spent working on them.

Dashboard

TimeCamp gives the ability to categorize and automatically calculate the productivity of time spent at the computer and – optionally – set up a way to account for time spent away from your computer as well.

Away Time

The desktop application registers time when computer is actively used. If for a certain time you don't use a mouse or keyboard, the application will register your time away from the computer.

Sites and Apps

In the Sites and Apps section, you can check the names of websites and applications that you've visited.

Activity Categories

The Activity categories section allows you to create a report based on groups of categories your activities are assigned to.

Timeline

The timeline report shows a chronological view of registered computer activities.

Goals

The goals section allows you to create goals and compare how much time you spent working on a computer and what type of application you were working on.

Efficiency

In the efficiency report, you can check and compare time spent on Top productive and Top Unproductive activities.

User Statistics

This report shows the login statistics of all users who joined the account. Here you'll find information about the

desktop app version and the last time of sync between the desktop app and web account.

Remote work detection New

This module allows you to determine whether your employees are working remotely or in the office, and monitor their work location.

Screenshots

Recording screenshots is an optional feature available after installing TimeCamp desktop app.
