Timeline

In this article:

- [Overview](#)

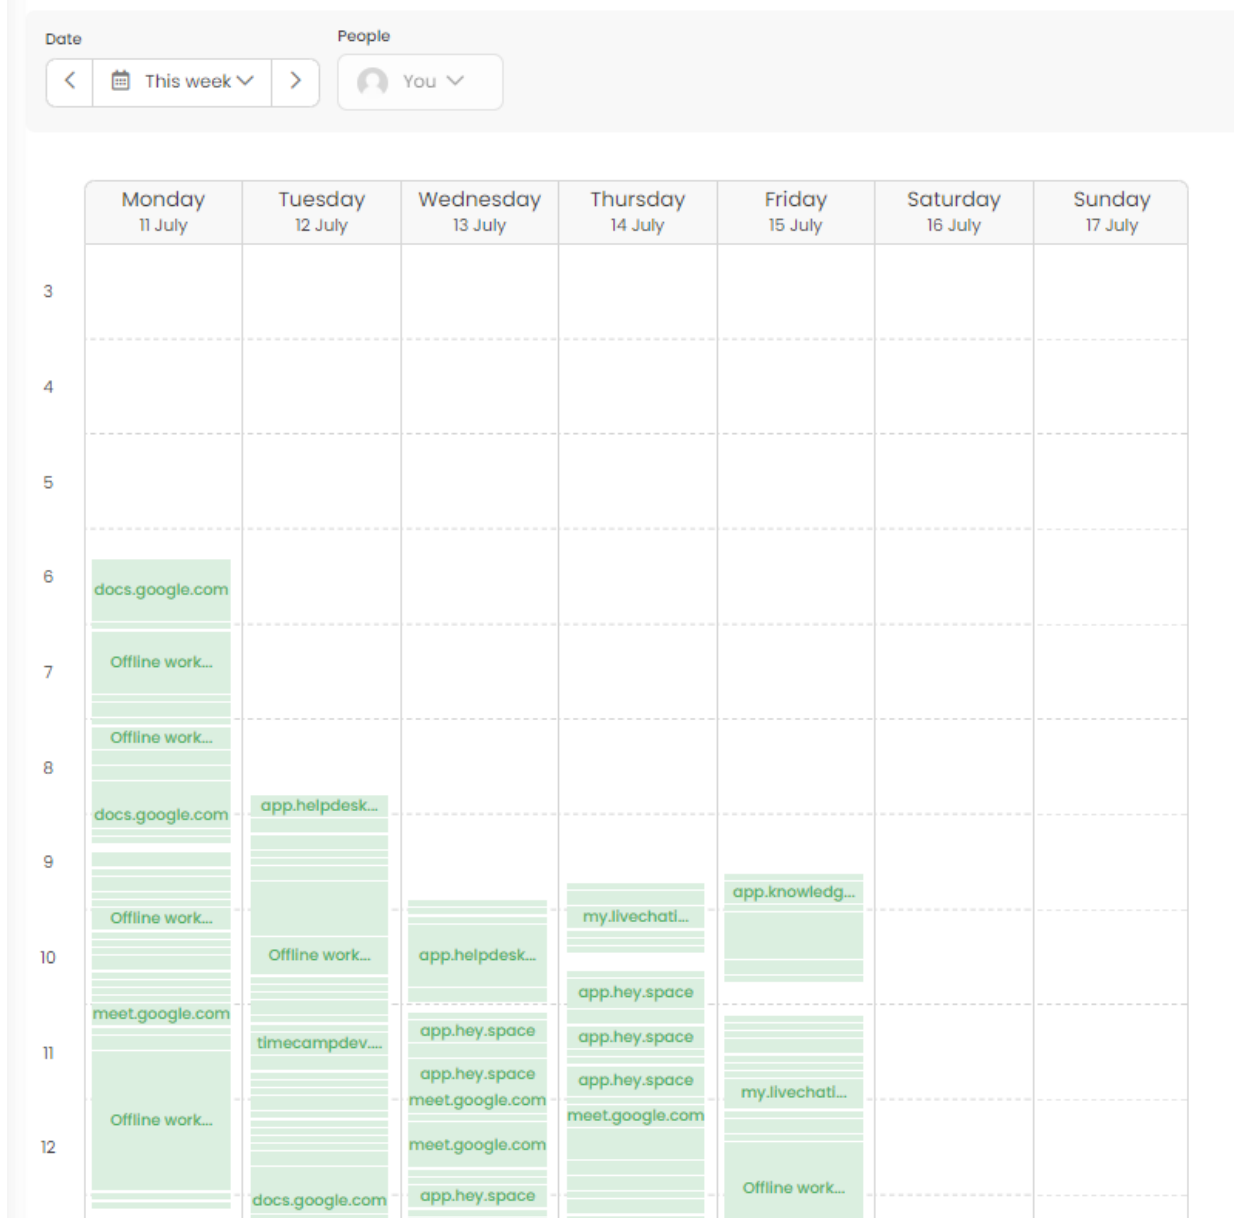

The Timeline tab is located under the **Computer Activities** reports on the left side menu:

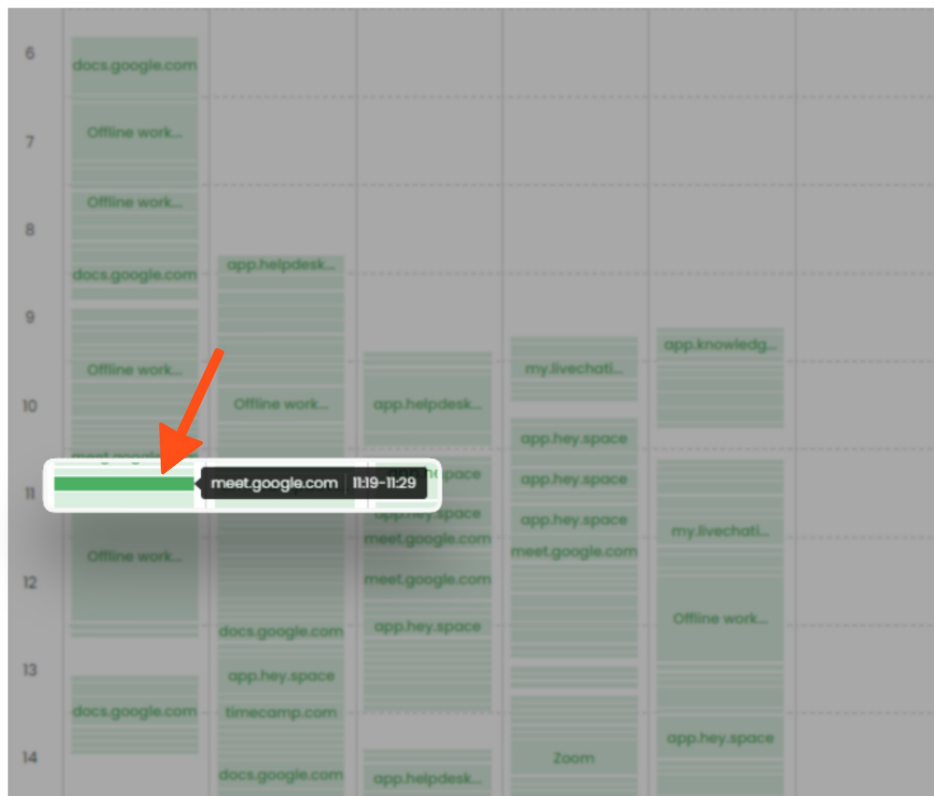

Overview

The timeline report shows a chronological view of registered computer activities. **Here you can use the date range filter and compare when and what activities were tracked during your workday.**

Timeline

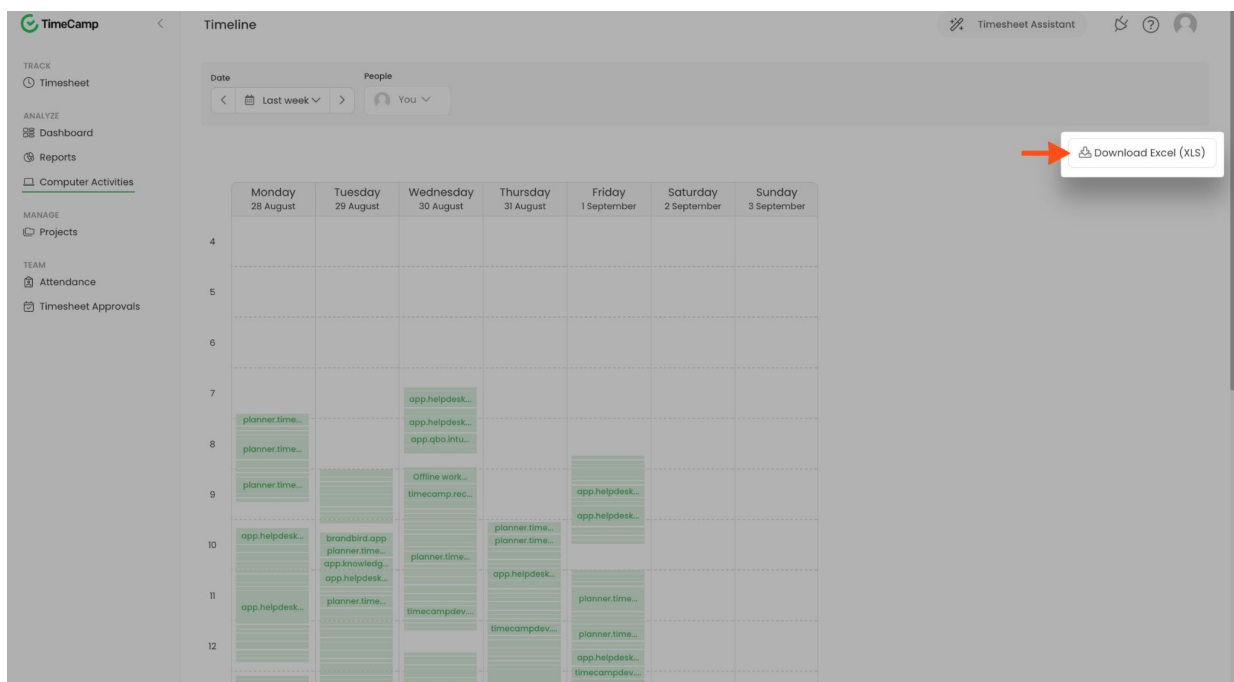

If you hover your mouse over a specific segment, you'll get information about the activity name and its timeframe.

You can **export** the Timeline report to an Excel file.

The downloaded report will contain the name of a user, date, title of activity and its category, the exact timeframes of each activity and their duration time.

One more hidden feature is that you can add your **Away time** within a Timeline section. Just use the drag-and-

drop method to create a timeframe and assign an activity.
