Location report

The location report will appear only after the GPS feature is enabled in account settings.

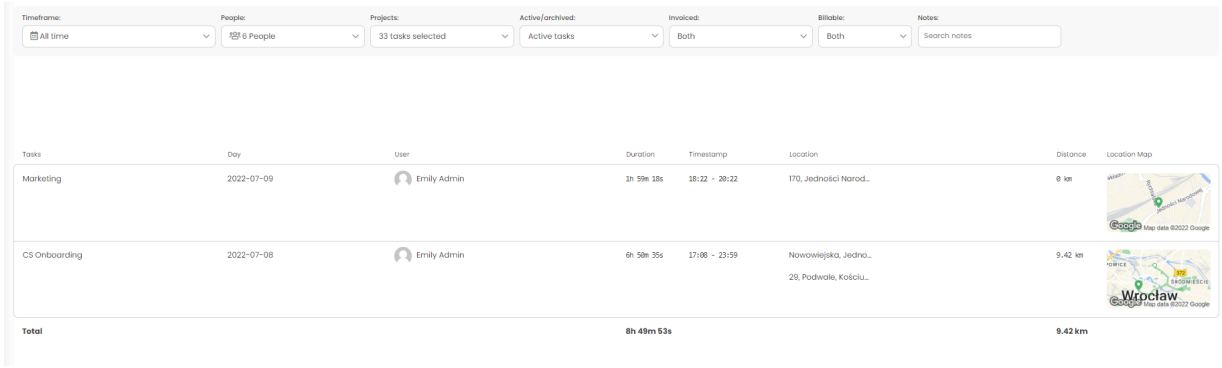

> Only Time Tracking Administrators have access to the location report

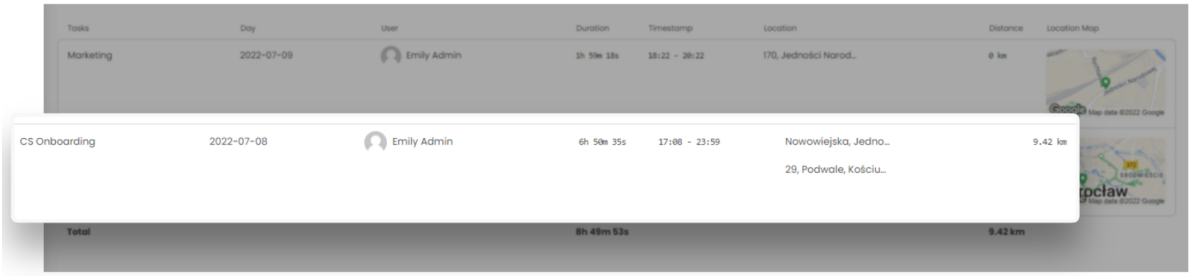

Location is tracked only if the user **tracks time with a mobile app and a timer for a task is running**.

The report will contain information about the duration time and timestamp of entries, information about assigned tasks, and users who tracked time. If the location changes the report will contain data about the distance between locations. You can also click on the location map to get a more detailed view.

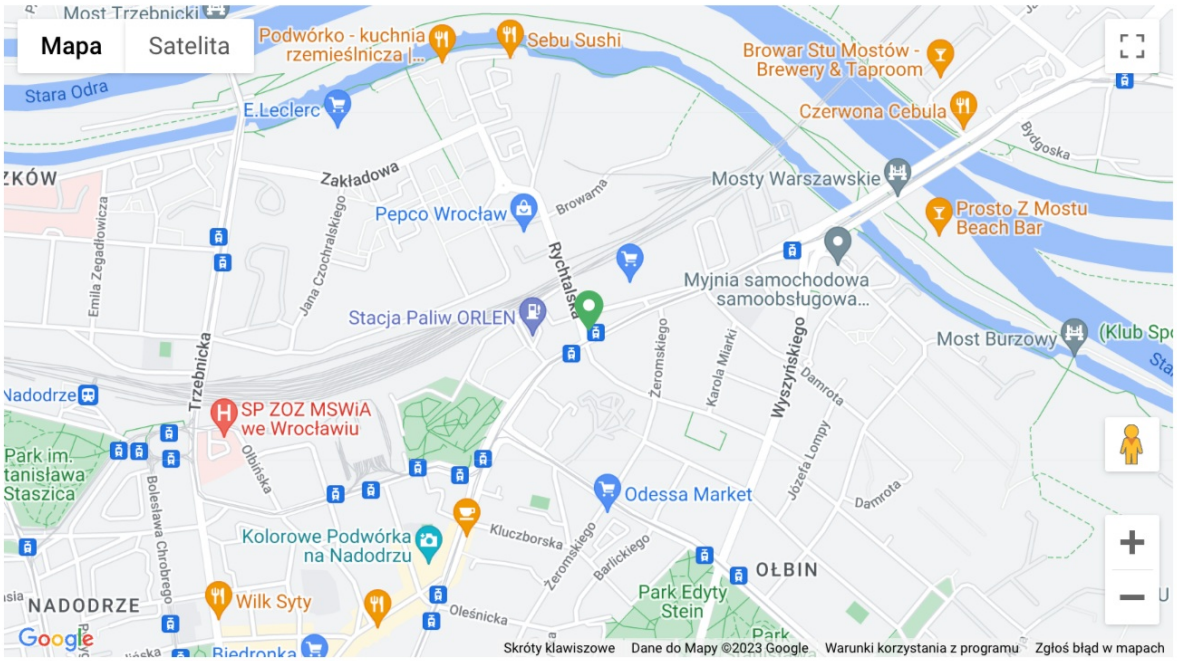

Example of a Location report:
