“Synchronise timeframe with duration”

On the right-hand side above the time panel, you can find some additional **Timesheet** settings. Just click on the “**3 vertical dots**” button:

One of these options is **Synchronise timeframe with duration**. By default “Synchronise timeframe with duration when editing time entry” is turned on. It means that **the duration time will be automatically adjusted while editing the timeframes of entry**.

Overview

We've prepared a few examples to explain how this setting affects editing your time entries.

Let's create a time entry from 10:00 am to 11:00 am and the duration is 1 hour. Now we would like to change the start time to 9:00 am and keep the end time unchanged. If the “Synchronize timeframe with duration” is turned on, the duration of this entry will be automatically increased to 2 hours. If the setting is turned off the duration time will stay the same and will be 1 hour.

The same way it works if you would like to change the duration time. Let's try with our previous entry from 10:00 am to 11:00 am and the duration time of 1 hour. We would like to increase the duration time to 2 hours. If

the “Synchronize timeframe with duration” is turned on, the start and end time will be automatically adjusted to the duration time so the end time will be changed to 12:00 pm. If the setting is turned off the start and end times will stay the same and will be 10:00 am - 11:00 am.

If you would like to merge entries this setting must be turned off, as timeframes and duration time will not match.

How to use this setting?

The setting "Synchronise timeframe with duration when editing time entry" works in two ways:

- **The turned-on setting** helps to automatically match timeframes and the duration time of your entry while tracking and modifying entries at the same time
- **The turned-off setting** helps to easily and faster edit and check the correctness of the Timesheet

This option may be useful if you would like to avoid creating a lot of entries to the same task within a day and would like to continue tracking time to the same task after a pause.

Options from the **When timer is started for existing time entry** section allow you to decide whether entries regarding the same task during a specific day should be automatically joined or left separate. To modify this option you need to turn off the “Synchronize timeframe with duration when editing time entry” feature first.

The screenshot shows the TimeCamp Timesheet interface. On the left is a sidebar with navigation options: TRACK (Timesheet, Expenses), ANALYZE (Dashboard, Reports, Computer Activities), MANAGE (Projects, Tags, Geofencing, Billing Rates), TEAM (Users, Attendance, Timesheet Approvals), and CLIENTS (Clients, Invoices). The main area is titled 'Timesheet' and shows 'Today, 18 July'. Below this is a text input 'What are you working?' and a 'Day type' dropdown set to 'Working day'. A large green box with a clock icon and the text 'No time logged today' is centered. A settings menu is open on the right, with three red arrows and numbers indicating key settings: 1 points to the menu icon, 2 points to the 'Synchronize timeframe with duration, when editing time' checkbox (which is checked), and 3 points to the 'When timer is started for existing time entry' section. This section has two radio button options: 'Create new time entry and start timer' (selected) and 'Modify total time in existing entry'. Below these is a note: 'Why is this disabled? It is not allowed to modify an existing entry, while synchronization timeframe with duration is on, due to incorrect values in duration and from-to time.' At the bottom of the settings menu are two checked options: 'Enable project and task favorites' and 'Show suggested in task picker'. A 'Submit for Approval' button is at the bottom right of the settings menu.

The option **Create new time entry and start timer** means that each time you continue tracking time to the already existing entry a new entry with the same task will be created. It will look like the following: existing entry → click the start button to continue tracking → a new entry with the same task is created.

Your browser does not support HTML5 video.

The option **Modify time in the existing entry** means that when you continue tracking time to the already existing entry it will be extended and continued until the current timestamp. As a result, empty spaces in the timesheet will be removed.
