Azure DevOps plugin

In this article:

- [Install Azure DevOps plugin](#)
- [Track time with Azure DevOps plugin](#)
- [Uninstall Azure DevOps plugin](#)

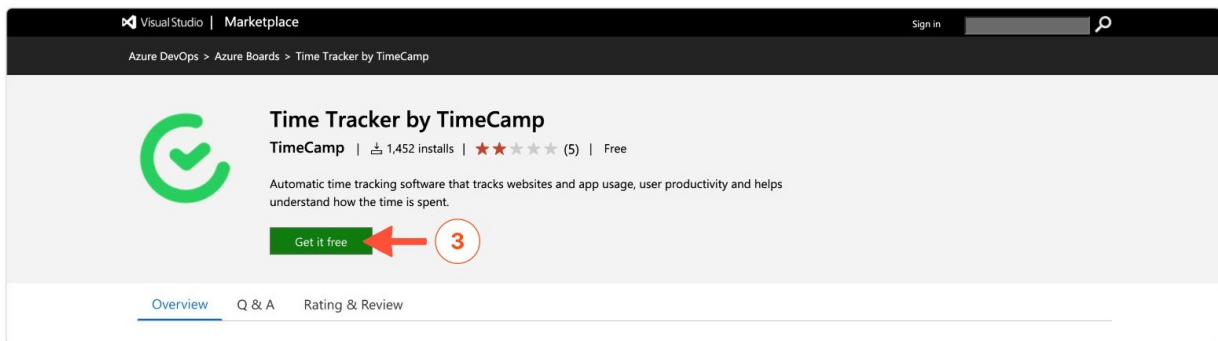

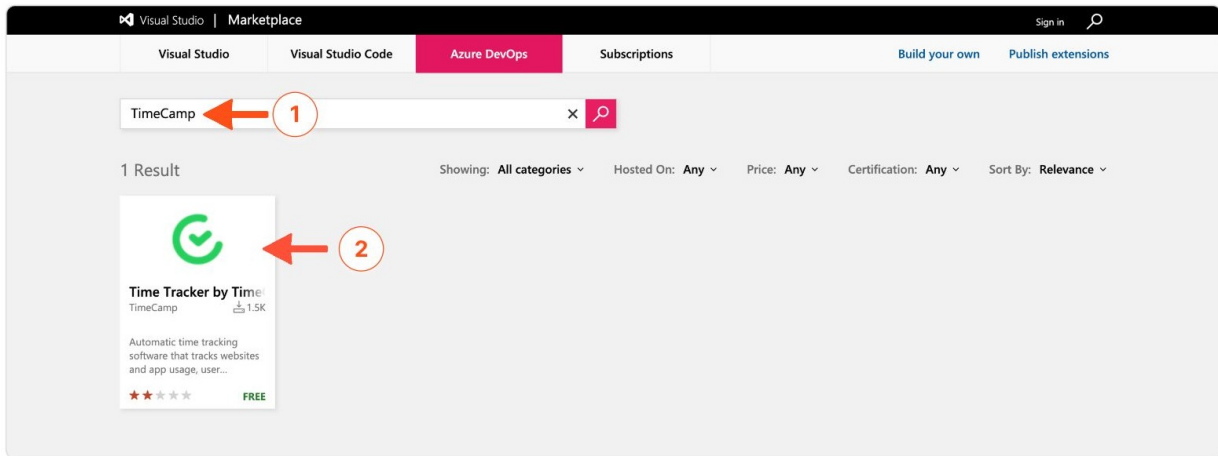

TimeCamp offers a rich [Azure DevOps integration](#), allowing you to track time on your stories, issues, bugs, and other programming stuff. We've also prepared an option to track time to items within Azure DevOps using a TimeCamp plugin.

To work properly, [integration with Azure DevOps](#) must be enabled on your TimeCamp account first.

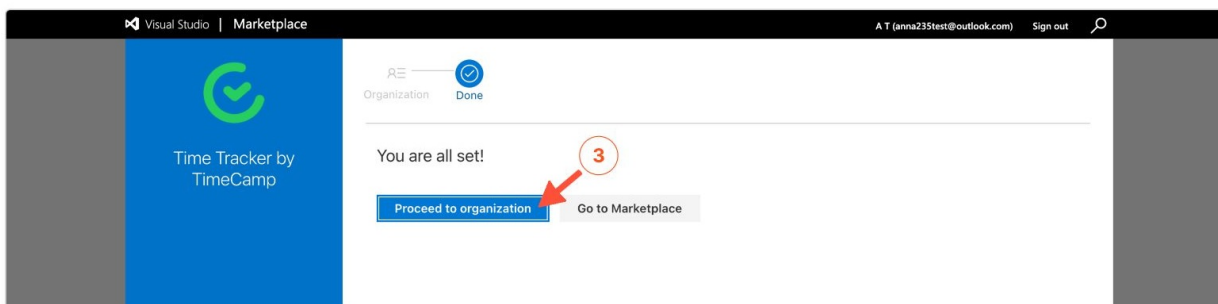

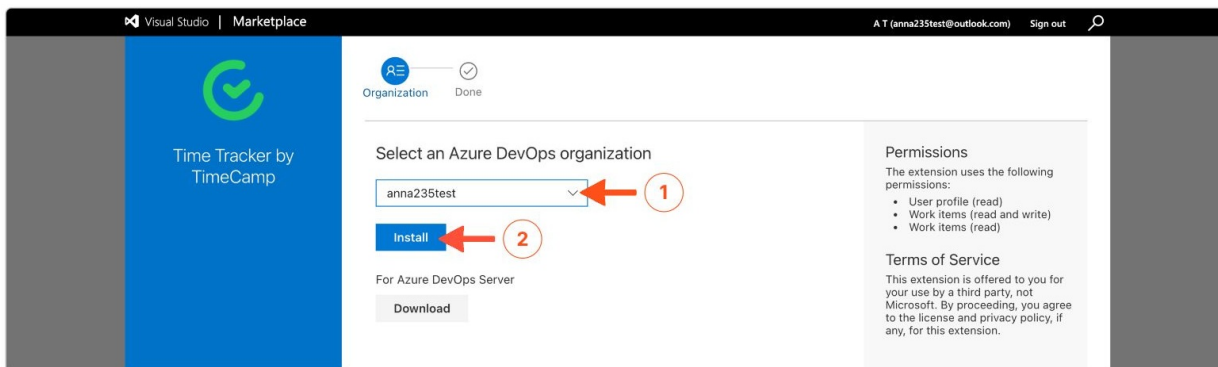

Install Azure DevOps plugin

You can find our "Timecamp Time Tracking" application on the [Azure DevOps marketplace](#). Simply search for 'timecamp' or use this direct [link](#).

Open the results and click on the green **Get it free** button.

Select the organization you wish to install the plugin for and click on the **Install** button.

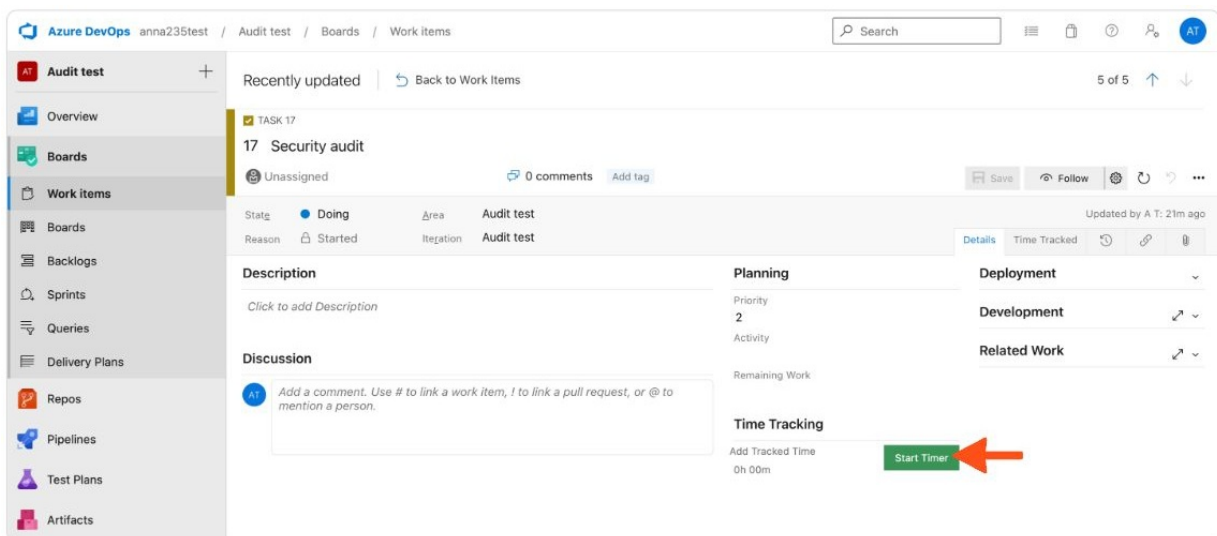

After completing the installation, you can navigate to your target item to start tracking time. While using it for the first time, you might need to run some additional configurations. You'll be asked to do so if you're not logged into your TimeCamp account.

Before you'll be able to track time, you'll need to enable the integration and choose projects you wish to import into TimeCamp in Integration settings.

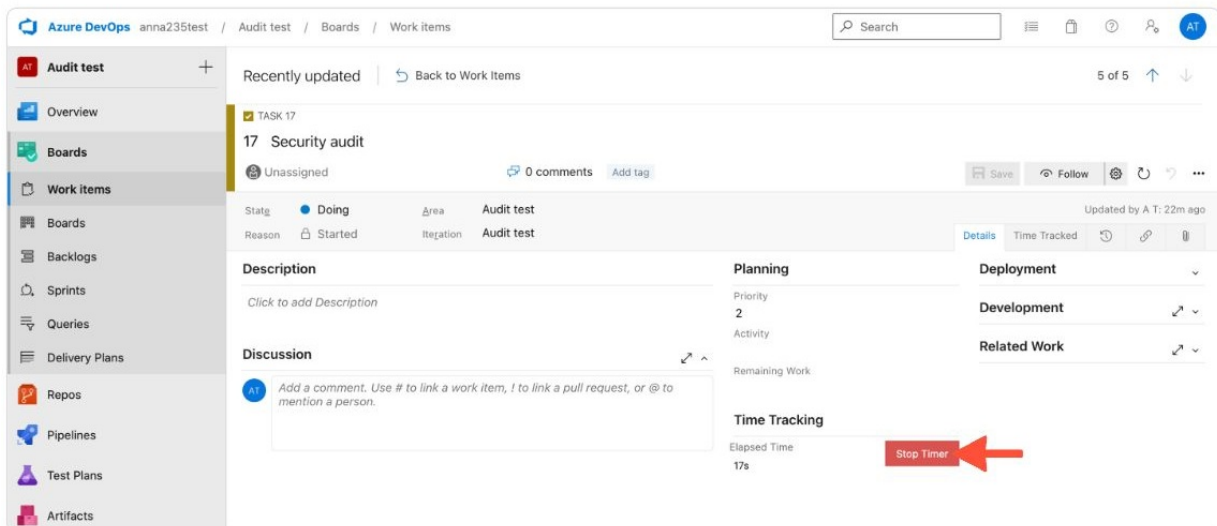

Track time with Azure DevOps plugin

Once the installation is completed and the integration enabled, you'll be able to add time to a task manually or simply start a timer from within Azure DevOps.

To start tracking time open the desired item and click on the green **Start timer** button. After finishing your work click on the red **Stop timer** button.

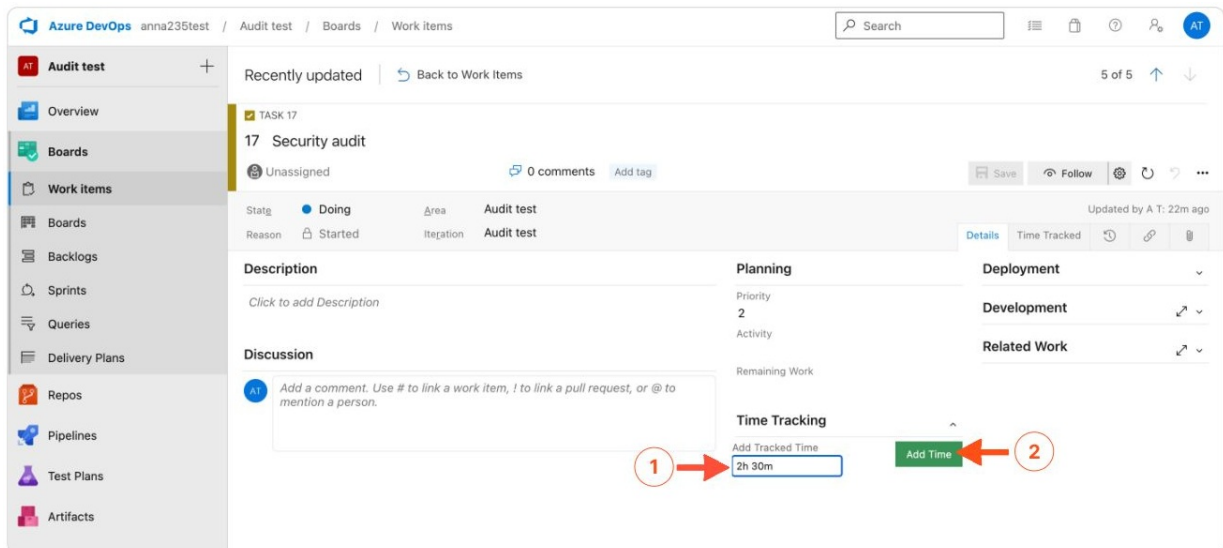

This screenshot shows the Azure DevOps interface for a task named '17 Security audit'. The task is in the 'Doing' state. In the 'Time Tracking' section, the 'Add Tracked Time' field is set to '0h 00m'. A green 'Start Timer' button is visible, with a red arrow pointing to it from the right.

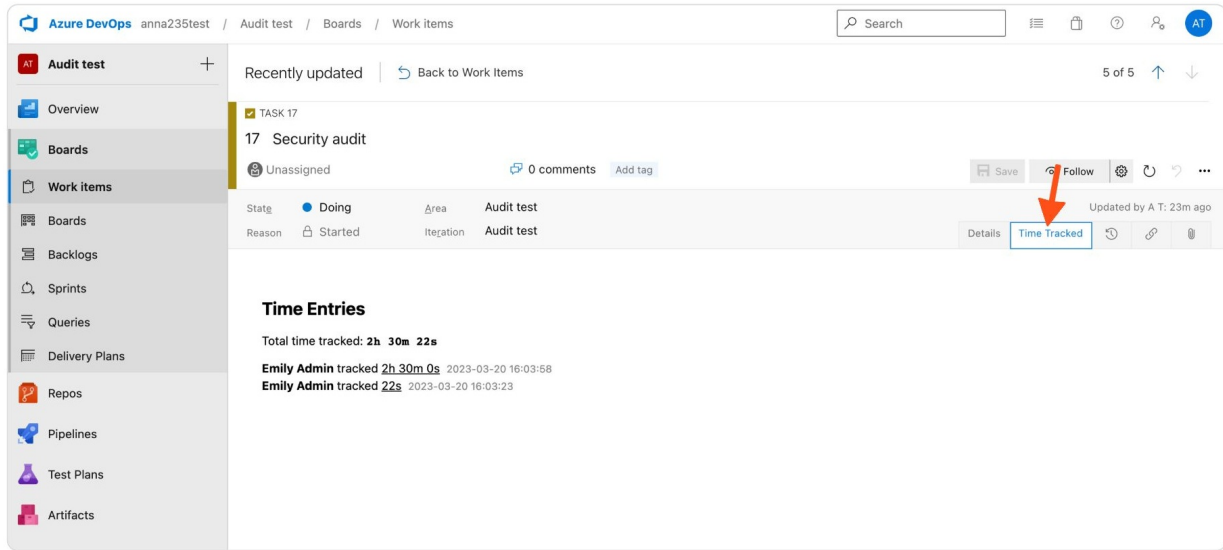

This screenshot shows the same Azure DevOps interface for the '17 Security audit' task. The 'Time Tracking' section now shows 'Elapsed Time' as '17s'. A red 'Stop Timer' button is visible, with a red arrow pointing to it from the right.

To add time manually you should input the duration time in "0h 00m" format and click on the green **Add time** button.

The plugin will be automatically synchronized with your web Timesheet.

All your time entries will be listed in the **Time Tracked** tab next to the Details tab in the item's view.

Uninstall Azure DevOps plugin

To remove the plugin navigate to your **Organization Settings** in Azure and navigate to the **Extensions** tab. Click on the TimeCamp Tracker on the list and select the **Uninstall** option.
